

## **Disjointed Rollovers in Dreamweaver 8 and CS3 using a fade and other transitions - tutorial by R. Berdan**

Disjointed Rollovers can be created in Dreamweaver 8 or CS3 using a Dreamweaver extension called FlevSawTrans102.mxp that is available free of charge from: <http://www.flevooware.nl/dreamweaver/extdetails.asp?extID=17>

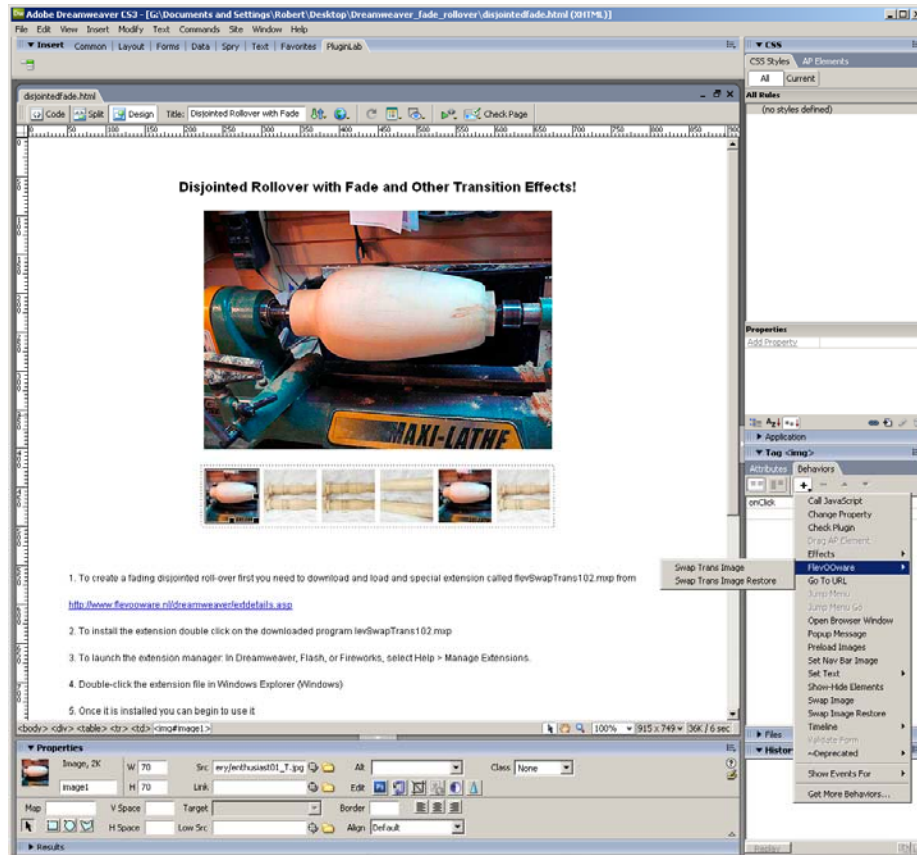

This item can be downloaded free of charge , once downloaded you need to install it, installation procedure is different for Dreamweaver CS3 and 8 see below..

### **Install extension for CS3**

To create a fading disjointed roll-over first you need to download and load and special extension called flevSwapTrans102.mxp from

<http://www.flevooware.nl/dreamweaver/extdetails.asp>

2. To install the extension double click on the downloaded program levSwapTrans102.mxp
3. To launch the extension manager: In Dreamweaver, Flash, or Fireworks, select Help > Manage Extensions.
4. Double-click the extension file in Windows Explorer (Windows)
5. Once it is installed you can begin to use it – it will appear in the behaviours drop down menu (see below).
6. To create a fade disjointed rollover - insert your images in a table and give each image a unique name e.g. the bit image was given the name e.g. "main" and the smaller images: image01, image02 etc.
7. First click on to select one of the smaller images then in the behaviours drop down box when selecting the + symbol - look for "FlevOOware" menu item - Select swap trans image.
9. Select the name "main" image in the largest window - then put your cursor in the browse box - Select Source to - navigate to the folder where the images are stored and select the large image that should appear when you click on the smaller image. Uncheck the box "Restore images on mouseout".
10. Finally in the behaviours box change the event handler onmouseover to onclick - then test your button by previewing.

To install the extension using Dreamweaver 8 – you need to drag it first into the extension folder - see instructions below

1. Download or copy the extension into the folder X:\Program Files\Macromedia\Extension Manager
2. Double click on the extension manager to start the program up
3. In the extension manager program select file>install extension
4. Select the extension flevSwapTrans102.mxp and it will ask to close Dreamweaver if open, do so and once the program is installed start up Dreamweaver, go to the behaviours box select the + symbol to show the drop down menu and in the menu should appear FlevOOware - which is the program you use to add the fade in out disjointed rollover script.
